# PARTNERSHIPS MATTER

BASEL ACTION NETWORK 2013 – 2014 ANNUAL REPORT

turn back the toxic tide

### **MISSION**

To champion global environmental health and justice by eliminating toxic trade, catalyzing a toxics-free future, and campaigning for everyone's right to a flourishing environment

### **VISION**

A bright future where we live harmoniously with ourselves, our technology, and our precious planet

### FROM THE EXECUTIVE DIRECTOR, JIM PUCKETT

Together, we've made significant progress towards eliminating toxic trade, the underhanded practice of more developed countries offloading their hazardous waste (especially electronic waste and old ships) to less developed countries.

We've pushed back against the tide of toxic trade by working for international consensus for stricter trade policies at the Basel Convention. We've advocated for global environmental justice by promoting proper ship recycling instead of shipbreaking. We've also continued to grow our successful alternative to e-waste trade, e-Stewards.

While we're the only organization that does all that we do, we certainly don't do it alone. In fact, we're only able to achieve anything thanks to the help and support of our many partners, donors, and volunteers.

Together, we're a global force to be reckoned with.

So thank you!

Sincerely,

Jim Puckett

The International Electronics Recycling Congress awarded BAN the Cowbell Award for our efforts to prevent the globalization of toxic waste and to promote the proper treatment of waste.

# **BASEL CONVENTION ADVOCACY**

As the only non-profit that regularly attends Basel Convention meetings, BAN's speeches are often instrumental in defending existing policies and advocating for just decisions.

The United Nations 1989 Basel Convention on the Control of Transboundary Movements of Hazardous Wastes and Their Disposal is a landmark agreement for environmental justice. Promoting national self-sufficiency, it restricts the export of hazardous wastes from more developed countries (MDCs) to less developed countries (LDCs).

In 1995, delegates from less developed countries boldly created the Ban Amendment, which would completely prohibit export from MDCs to LDCs. Since then, BAN has continually advocated with this group for the ban.

These past two years, BAN has traveled the globe to build consensus for just trade policies. We participated in Basel's Partnership for Action on Computing Equipment (PACE) group in Indonesia. In El Salvador, we presented a workshop on facilitating the Ban Amendment's entry into force.

At both the Open-Ended Working Group and the Conference of the Parties 11 in Switzerland, we proposed a landmark compromise together with Dell and HP. Together, we're navigating the tough issue of permitting export for repair without creating a loophole where any actual e-waste can also be exported.

"We are so grateful to BAN for their tireless efforts to protect Nigeria and the entire continent of Africa from receiving massive shipments of non-working, obsolete electronic equipment. Future generations of Africans will avoid the sad fate of lead poisoning, cancer, and worse, thanks to BAN's ongoing campaigns."

Miranda Amachree, Acting Director, National Environmental Standards & Regulations Enforcement Agency in Nigeria

# **GREEN SHIP RECYCLING**

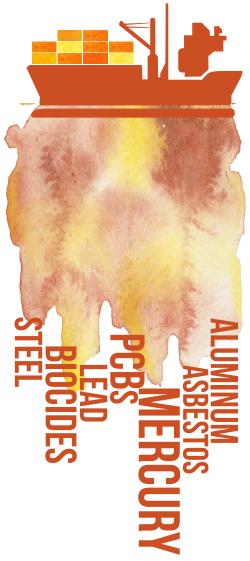

BAN campaigns internationally and nationally for the proper recycling of end-of-life ships. Ships impact all of our lives in ways we hardly realize. From the organic cotton shirts on our backs to the latest gadget at our fingertips, approximately 90% of the goods we

buy are transported via cargo ships.

the world's end-of-life ships.

At the Basel Convention Conference of the Parties 11, BAN, the NGO Shipbreaking Platform, and the Center for International Environmental Law hosted a successful event drawing attention to the European Union's efforts to remove ships from the Convention. Together, we promoted upholding the convention's principles of protecting human and environmental health from toxic substances.

Nationally, BAN and our local nonprofit partners successfully advocated that the U.S. Navy send three aircraft carriers - Forrestal, Constellation, and Saratoga - to responsible ship recyclers in Brownsville, Texas, rather than sinking them for target practice. Each ship boosted local green jobs, recirculated metals through the economy, and protected the ocean from harmful pollutants such as lead, asbestos, mercury, and polychlorinated biphenyls (PCBs). In partnership with the NGO Shipbreaking Platform, we continue to strive to ensure that even more ships are recycled responsibly rather than sunk or sent to dangerous shipbreaking yards in Southeast Asia.

BAN advocates against SINKEX, the U.S Navy's target practice sinking exercise, to protect the oceans and create green jobs.

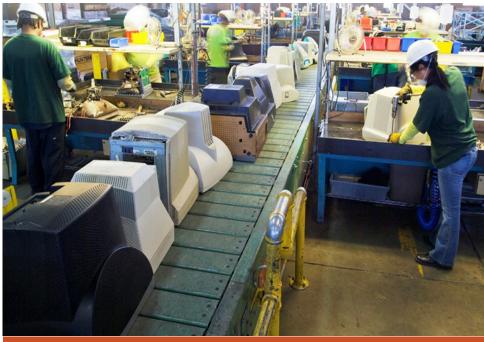

# **ELECTRONIC WASTE STEWARDSHIP**

To help everyone tackle their toxic footprint, BAN's e-Stewards® Program certifies socially and environmentally responsible electronics recyclers. With recyclers, enterprises, and auditors, we're creating a successful and growing market solution which provides a viable alternative to e-waste export.

After years of consultation with leading recycling experts, certification bodies, and occupational health experts, we published the updated e-Stewards Certification Standard Version 2.0 in November 2013. Recognizing that auditors are central to the certification's success, BAN partnered with SAI Global to train auditors to the new standard. Together, we also created top-notch implementation training to help e-Stewards recyclers comply with the enhanced new version.

BAN also created the e-Stewards Marketplace, a secure business-to-business online trading platform that connects any company or group with e-waste to an e-Stewards recycler. Now anyone can easily dispose of used electronics with the world's most responsible recyclers.

e-Stewards certified recyclers adhere to the industry's gold standard for occupational health and safety.

Throughout the past two years, we welcomed more recyclers and enterprises to the e-Stewards Program. Most notably, Arrow Electronics achieved certification in all of its recycling plants worldwide. LG Electronics updated its consumer take-back program to ensure all electronics are recycled responsibly. On Earth Day 2013, Staples began offering free drop off for e-Stewards recycling at all of its U.S. stores.

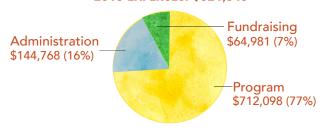

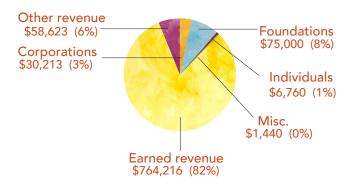

The new, easy-to-use e-Stewards E-waste Calculator App (Apple IOS and Android) helps companies quantify the value of their e-Stewards commitment. Enter in how much e-waste you've recycled responsibly, and you'll see the greenhouse gas emissions saved and the amount of toxic chemicals diverted.

# 2013-2014 FINANCIAL REPORT

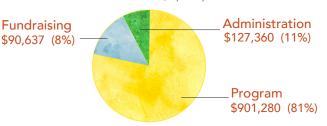

#### 2013 EXPENSES: \$921.848

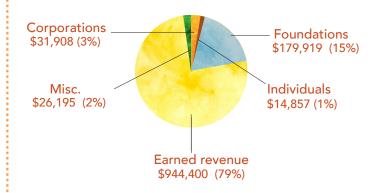

#### 2013 INCOME: \$936,252

#### 2014 EXPENSES: \$1,119,277

2014 INCOME: \$1,197,434

### **STAFF**

Jim Puckett, Executive Director
Shannon Thomas, M.N.P.L., Chief Operating Officer
Greg Swan, e-Stewards Certification Director
Sarah Westervelt, M.A., Policy Director
Colby Self, Green Ship Recycling Campaign Manager
Mandy Knudtson, M.A., e-Stewards Business Director
Lisa Sammons, e-Stewards Enterprise Business Manager
Rachel Bloom, Marketing & Communications Manager
Eric Hopson, M.A., Research Manager
Ashley Knapp, M.A., Grants Manager
Angelo Godbey, Information Technology Manager
Hayley Palmer, Office Manager
Julia Jaross, Communications Coordinator
